Thunkable: Test and Share Your App

Try your app on a real phone, fix bugs and show it off.

Thunkable | Beginner to Intermediate | Ages 10–16

💡 The Big Idea

- Testing means trying your app to see if it works the way you planned.
- Test early and often, not only at the end.
- Thunkable has a free Thunkable Live app so you can try your app on your own phone.
- When you edit in the browser, the phone shows the changes almost straight away.
- Sharing comes last, after your app has been tested.

📱 How to Test

- Install the Thunkable Live app on your phone.
- Sign in with the same account you use on the website.
- Use the Live Test option in Thunkable to connect your project to your phone.
- Tap every button and try every screen.
- Try silly answers to see if the app breaks.

🔗 Ways to Share

- Share your project with a friend or classmate so they can look at or remix it.
- Show the app live on your phone using Thunkable Live.
- Publishing to Google Play or the Apple App Store has extra steps, and Apple and Google charge their own developer fees.
- Ask a parent before publishing anything online.

✅ Before You Share

- Every button does something.
- No spelling mistakes in labels and buttons.
- Text is big enough to read on a phone.
- The app works if the user types nothing.
- You have removed any personal details.

💻 Test Plan Examples

Test plan for a quiz app — Checklist

```
1. Open the app             -> Start screen appears?
2. Tap Start                -> Question screen opens?
3. Type the right answer    -> Shows Correct!?
4. Type a wrong answer      -> Shows Try again?
5. Leave the box empty      -> App does not crash?
```

▶ **Result:**

Tick each line. If one fails, you have found a bug to fix.

Bug: the label never changes — Fix

```
Problem: Label1 still says Hello after tapping.
Check 1: Is the set Label1.Text block inside when Button1.Click?
Check 2: Is the right Label name used?
```

▶ **Fix:**

Move the block inside the event, and use the right component name.

Bug: button does nothing — Fix

```
Problem: Button1 does not respond.
Check 1: Is there a when Button1.Click do block?
Check 2: Is it on the same screen as the button?
```

▶ **Fix:**

Add the event block on the correct screen.

📚 Key Terms

Test
Try the app to check it works.

Share
Let others see or use your project.

Live Test
Use your phone to preview the app while you build.

Publish
Put your app on an app store.

Thunkable Live
The free app for previewing Thunkable projects.

Developer account
An account the app stores require to publish apps.

Bug
A mistake that makes the app act wrongly.

Remix
Copy a project and change it.

Debug
Find and fix bugs.

Edge case
An unusual situation, like an empty answer.

🧮 Quick Reference

```
Test    -> tap everything
Break   -> try silly inputs
Fix     -> change one thing
Retest  -> try again
Share   -> after testing
```

✏️ Worked Examples

Q: Your app works in the browser but you cannot see it on your phone.

A: Check that Thunkable Live is installed, you are signed in to the same account, and your phone is online.

Q: A friend types nothing and the app shows an odd message.

A: Add an if block to check whether the text box is empty. If it is, show Please type your answer.

Q: You want classmates to try your app.

A: Share the project or show it on your phone with Thunkable Live. Ask a parent before publishing it publicly.

🚫 Common Mistakes

- Waiting until the end to test.
- Only testing the happy path. Real users do surprising things.
- Changing lots of things at once, then not knowing what broke the app.
- Sharing before checking spelling.
- Including personal information in an app you share.

👨‍👩‍👧 Parent Corner

- Be the tester. Ask your child to hand you the phone and watch what you tap.
- Help with the app store fees and rules if they want to publish, and keep the account in your name.
- Check what permissions an app asks for, like camera or location.
- Encourage them to write down every bug they find.
- Celebrate a finished, tested app, even if it is small.

🎯 Quick Check

1. What app lets you preview a Thunkable project on your phone?

✅ Thunkable Live.

2. Why test early and often?

✅ To find and fix bugs before they pile up.

3. What is a bug?

✅ A mistake that makes the app work wrongly.

4. What should you do before sharing an app?

✅ Test it, check spelling and remove personal details.

5. Who should you ask before publishing an app online?

✅ A parent or guardian.
